Insurance You Can Wear

The MOB alerting and locating systems that underwent operational trials—the Alert2, LifeTag, MOBi-lert, and Sea Marshall—generate an audible alarm and can initiate other automated functions when the beacon unit is immersed. All but the Alert2 system are also activated when the beacon leaves the proximity of the base unit. Each manufacturer offers multiple options for wearing its beacon, including: an elastic arm band (LifeTag, top left), fastened to a life vest (MOBi-lert, top right), and around the person's neck (Sea Marshall, right). The Alert2 handheld DF antenna (below left), is designed to pick up the beacon signal at a distance of one mile.
