

A CLOSER LOOK

Foils: The Furling Backbone

As with their ball bearings, the head-swivel furlers we tested each had a unique foil design. **1.** One noteworthy foil feature is that of the Z-Spar Z-780. It can be delivered as one piece, a segment-less foil that does not require being snapped together or cut to fit. **2.** The Furlex foil sections have double sail slots that are aerodynamic in shape. **3.** ProFurl's two foil tubes are round and the C-shaped connector spline is anodized to reduce corrosion.
