

## Connections

- 1.** The Nexus wind sensor features twin fins and a turbine-style rotor. The solar panel and battery compartment is integrated into the shaft below the sensor.
- 2.** The Nexus' basic server has auxiliary connections for a remote alarm buzzer, handy on bigger boats.
- 3.** Two small solar panels at the top of the Nexus wind sensor provide power.
- 4.** The transducer wiring module for the Tacktick Race Master has input for optional 12-volt power (right), recommended for cruising.
