

PROPULSION

1. The Torqeedo's battery LED indicator light is hard to see in sunlight and impossible to check without leaning over the top of the engine.

2. Thumbscrews on the bracket make it easy to assemble and break down the engine for storage.

3. A sticker on the tiller indicates speed settings.

4. Surface corrosion was already setting in on some of the stainless steel fasteners, including the bracket screws.

5. The big prop is designed for optimal efficiency.
