I seen no reason to rate them. I've used all of these and they all work fine.

Feel is personal.

The SPF rating determined by a very strict FDA test. I doubt any journalism-supported lab could approach the accuracy.

I read *Consumer Reports* procedure, and used a much smaller sample size (4 vs. 10 minimum).

The very similar ingredients support that the SPF would be similar across all of these products.

All are SPF 45-50 lotions. No sprays, since I don't think they make sense on a boat.
